| Color | White |
| Size | 10ft x 10ft(15'x15' and 20x20' available) or customized |
| Fabric Material | 100% fire retardant polyester fabric |

Product Material :

Tent lining materials are used to enhance the interior aesthetics, insulation, and comfort of a tent. They can help create a more inviting and cozy atmosphere, especially in larger tents used for events, weddings, or other special occasions. Here are some common materials used for tent lining:

Fabric: Various types of fabrics can be used as tent lining, such as polyester, silk, satin, or cotton. These fabrics can be chosen in different colors, patterns, and textures to match the desired theme or ambiance. Fabric linings can be draped along the walls and ceiling of the tent to create an elegant and sophisticated look.

Voile or Sheer Fabrics: Lightweight sheer fabrics like voile can be used to create a soft and dreamy effect. They can be layered or hung as panels to diffuse light and add a touch of romance to the interior.

Velvet: Velvet is a luxurious and plush material that can add richness to the tent's interior. It provides excellent insulation and sound absorption, making it a good choice for colder climates or events where noise reduction is important.

Satin: Satin is a shiny and smooth fabric that adds a touch of glamour to the tent's interior. It reflects light beautifully and can create a visually appealing atmosphere, especially when combined with appropriate lighting.

Chiffon: Chiffon is a lightweight and translucent fabric that can create a soft and ethereal look. It can be used for draping, swags, or canopy-like installations to add a delicate touch to the tent's decor.

Paper Lanterns: While not a traditional lining material, paper lanterns can be hung from the tent's ceiling to add a festive and whimsical vibe. They come in various colors and sizes and can be lit up to create a warm and inviting glow.

Bunting and Garlands: Decorative bunting or garlands made of fabric, paper, or other materials can be strung across the tent's interior to add color and visual interest.

Thermal Liners: In colder weather, thermal liners can be used to add an extra layer of insulation to the tent. These liners are often made of insulating materials that help retain heat and improve comfort.

Custom Printing: For branded or themed events, custom-printed linings can be used to display logos, patterns, or images that align with the event's branding or concept.

Product description :

The soft, flowing fabric of our Tendars Tent Liners spices up the traditional wedding reception, and also acts as a great canvas for colored lighting to match to whatever your decor may be. All of Tendars' liners are made from pleated, 100% fire retardant polyester fabric, meeting both the California Fire Marshal Title 19 and NFPA 701 standards.

To choose the liner for you, select your tent's width followed by the overall tent dimensions. Liners are constructed in the same manner as

sectional tents, where end pieces are combined with mids in order to create the area required for any size tent.
