Optional accessories :

2. covers: colorful cover, transparent cover, inflatable roof cover
3. sidewalls: glass wall, PVC hard wall, sandwich pannelled wall, fiber glass wall
4. windows: dome or square clear PVC windows, mesh window, glass window
5. doors: double-swings glass door, single-swing glass door, glass fire door, hard PVC door, rolling door
6. wooden flooring system
7. rain gutters (inner roof beam rain gutter or rain gutter between two tents)
8. drapers, curtain, lighting, AC, carpet, etc.

Optional Fixing methods :

Tents can be erected on the site without special requirements for the ground types, all the common ground types such as sand, lawn, asphalt, concrete and tile floor are OK for you to set up the tents. But tent fixing methods are different for different terrain conditions and usage of tents. As the leading brand in China, WT Tent provides you four tent fixing methods.

- Concrete floor (temporary solution)

General speaking, you can fix the tent base plates by expandable bolts on concrete and asphalt floor (at least 25cm thick). It's a simple fixing method that can fix the tents very well, but the expandable bolts will do some damages to the concrete or asphalt floor, so you need to pre-consider whether the ground is allowed to be destructed or not.

- Lawn or soil (all soft-base ground)

This fixing method mainly applies to soft ground types like sand, soil or lawn, and is usually used in outdoor lawn wedding tents, tents erected in parks etc. We use the steel pegs (ground anchors) to fix the tent firmly on the ground, and you just need to fill the small holes in the ground after the tents and pegs are removed.

- All damage-avoid ground

This fixing method is usually for the ground types such as marble or tile floors which are difficult to repair after damages. We use the weight plates to suppress the tent base plates by putting sandbags, concrete blocks or stones on the weight-bearing parts of the weight plates. Using this method will do no damages to the ground, but it needs more space to place the weight plates, and it looks relatively not as aesthetic as the tents fixed by expandable bolts or steel pegs.

- Concrete Base (permanent fixing solution)

This fixing method is for long-term permanent usage of tents, mainly for long-term usage of storage tents, workshop tents etc. If adopting this method, you also need to drill holes in the concrete base and fix the tent base plates with expandable bolts, and then you can cover the tent base plates with concrete.

Professional Packing :

2. Aluminum frame packed in membrane film

3. Hardware packed in solid carton box
4. PVC covers are packed in professional PVC carry bag
5. Customized package
