Flame retardant to DIN 4102 B1, M2 German.
- 7) Working temperature: -40--+70
- 8) Wind resistance: 100km/h

The quality and stability of the tent ABS wall :

Tent around the curtain can have a lot of choices, from the conventional tarpaulin to choose transparent tarpaulin, with window tarpaulin, without window tarpaulin, you can also choose color steel, glass curtain wall and abs board, today to introduce abs board. abs board as a new choice in the tent industry in recent years, because he has the following advantages:

First, aesthetics. abs board is very easy to customize the color customers want, the regular beige has shown his atmosphere, used to replace ordinary tarpaulin is a very good choice, suitable for outdoor individual shopping malls, rest areas and other places.

Second, the intensity is high. abs board has excellent impact strength, good dimensional stability, dyeing, molding and machining, high mechanical strength, high stiffness, low water absorption, good corrosion resistance, simple connection, non-toxic and tasteless, with excellent chemical properties and electrical insulation properties. Ideal for use as a temporary building wall.

Treatment After Fixing method :

According to the different size of the project is also different, the size of the site is not the same. However, in addition to the method of using seed blocks, different materials will be used in different places to fix the tent.

The soil and sand ground will be fixed with steel, and this deep-buried fixing method is suitable for the ground that is easy to loose. The treatment after the demolition of the tent is also relatively simple, only need to pull out the steel can be landfill.

Cement pavement and asphalt pavement are generally fixed with expansion screws, which will only leave some small holes after the demolition of the tent, and will not affect the appearance of the road surface. If you want to treat it, you can use cement to smooth the road surface, and the impact on the road surface is very small.

Installation :

Is there any way to greatly reduce the cost? Yes, I have! Just do the following:

1. Please ask the tent manufacturer to provide detailed installation diagram or installation video.
2. Provide drawings at the same time, manufacturers can conduct video online guidance.
3. Send a worker to the local area to give technical guidance.
