Sidewall	Allowed Temperature Condition: -40°to +70°temperature Max Wind Speed Allowance: 120km/h Snow Load: 75kg/sqm
Connection	Hot-DIPPED Galvanized Steel Connections; 100% Zinc Shine Hot Dip Galvanizing Guaranteed

How to organize outdoor activities in this hot summer?

Outdoor activities are essential to the tent building, air conditioning, lighting and so on.

If the owner of the tent is composed of aluminum alloy frame and tarpaulin, it is mainly used for various large-scale outdoor activities such as the foundation ceremony, wedding, beer festival, sports event tent and so on. Will our tarpaulin be affected by the high temperature for a long time?

This problem is not to worry about, because our tarpaulin is double-coated knife scraping cloth, with anti-ultraviolet, waterproof and anti-mildew, not easy to yellow, not afraid of tearing, our tarpaulin can generally be used for about 5 years. In hot summer, we can install air conditioning equipment, ceiling fans and other equipment to keep our tent comfortable environment.

Advantage :

The aluminum alloy structure of the tent is more firm than the simple tent, can withstand 8 to 10 strong winds, 10cm of snow, the use of tarpaulin flame retardant, waterproof, easy to dismantle, the interior can build a stage and other supporting facilities, is the wedding of choice.

The interior of the tent can be equipped with air conditioning, warm in winter and cool in summer, to ensure constant temperature, and also to allow guests to have a better sense of body in the banquet. Stage, lighting, gauze curtain can also be arranged in the interior, different styles make the tent interior unique, you can have Western-style wedding layout, there are also bright red Chinese traditional collocation.

The ordinary simple wedding tent can only provide the effect of shading, and the service life is only 2 to 3 years, while the service life of the aluminum alloy wedding tent can reach 8 to 10 years, which can save costs. Tarpaulin is easy to clean, flushing can be done after using ordinary cleaning agent. Therefore, more and more businesses that rent tents will order large wedding tents, because they are atmospheric, beautiful, practical and cost-effective.

Notice :

The tent can adapt to most of the site, such as customers with special requirements, designers can first modify the drawing through modeling,

combined with field investigation to draw the effect, and finally modify the details of the construction situation. One customer needs wedding

project, he needs to use one end of the villa to connect to the tent, do a staircase, let the bride walk down from above, combined with the lighting stage, such a wedding effect is very good, so the designer in two visits to the survey, made a drawing modification, so that one end of the tent can

perfect grafting villa balcony, to achieve the effect that the customer wants. If the tent needs to be used for a long time and requires very stability, you can also drive steel into the concrete ground and add additional counterweight stones, which can achieve the effect of wind protection, which is very suitable for the use of coastal cities.
