Product Description

Alluminum Alloy Sports Hall Tent With Double Coated PVC Fabric Cover Big Clear Tent

Description :

Product Name	Sport court tent
Main Frame Structure	Aluminium alloy T6061-T6
Snow Load	75kg/sqm
Roof Cover Material	850g/sqm white PVC fabric
Temperature Condition Index	-30 ~ +70
Wind load	100km/h
Certification	SGS, CE
Lifespan	20 years for the frame and 5 years for the cover

The advantages of prefabricated awnings as sports venues :

1. Construction cost: The transformation of the open-air court into an indoor arena from the construction cycle to the labor is a small expense, but the basketball tent from production to the end of the construction only takes more than 10 days, and all the frames of the tent are completed in the factory, which greatly saves the labor cost.
2. Approval process: The tent building is a temporary building, which is convenient for approval. Secondly, the tarpaulin has the effect of flame retardant and self-extinguishing from the fire at the fire level can be accepted.
3. Safety performance: The main frame of the tent is made of aluminum alloy frame, steel parts are connected, the base is fixed, the mechanical properties are strong and the wind resistance level can reach 8-10, the aluminum alloy material is lightweight and convenient to transport, and the roof is specially added with a horizontal pull wire rope for snow resistance.
4. Decoration: Rest seats can be installed around the stadium, and a series of facilities and equipment such as LED lights, ceiling fans and air conditioners can be installed inside the tent.

In addition to providing basketball tent also provides badminton court tent, volleyball court tent, football stadium tent, swimming tent and so on. The appearance of the tent is unique and common, such as the character canopy, peach canopy, arc canopy, and the wall of the tent can also have a variety of choices of glass walls, abs panels, sandwich panels, etc.

How to quickly build a basketball tent?

Today to introduce the assembly rate total tent, this new construction method as a sports venue by everyone's welcome, we talk about the advantages of basketball tent. The basketball tent is a temporary building that is more convenient in the approval process.

Secondly, the basketball tent has very low requirements for the venue, and the tent can be built on the roof of an empty building. Tents can also be built on the existing basketball court ground; The main profile of the tent is aluminum alloy frame to ensure the safety of use; Tarpaulin is PVC double-sided knife coated cloth with flame retardant, anti-ultraviolet, anti-rain and anti-mildew performance; Rock wool sandwich board can be used for insulation and sound insulation.

Aluminum alloy basketball tent does not need to lay the foundation, there is no column in the middle can make full use of space, the use of modular construction, can be put into use in a short time.

The biggest advantage of this aluminum alloy prefabricated building is that it can be dismantled quickly when the venue is no longer in use. After the demolition, it can be used twice, because after the demolition, all kinds of standard spare parts can be easily installed again, and many customers will be particularly fond of this advantage, because the one-time investment lifetime return.

Why do you choose a tent as a stadium ?

The cycling of sports events is relatively strong and is used in a short period of time. Our tent is a modular building that can be repeatedly disassembled and installed, and can be recycled indefinitely, and the tent has become a new favorite of sports events. At present, urban land is tight, the construction of a fixed stadium is costly and difficult to approve, and the tent is a temporary building that is easy to approve. The interior of the tent can be installed according to the requirements of the indoor venue. Inside the tent can be installed exhaust system, floor, lighting system exhaust fan and other equipment. All the components of the tent are completed in the factory, and can be constructed and installed on site. The tent can be put into use after the construction is completed, without some problems such as loose smell and formaldehyde removal.
