Wooden floor: packed in wooden frame.

The benefits of outdoor swimming pools:

In the summer, the outdoor swimming pool has long been unpopular with the public, especially in the sun, consumers are not feeling the outdoor swimming pool, so the open-air swimming pool covered by the tent can bring some advantages to the business:

provides the sun protection function: In summer, the temperature is high and the ultraviolet rays are strong, and the customers in the swimming pool need to be exposed to the sun for a long time, and the construction of the tent can provide customers with comfortable shade and effectively prevent sunburn, heat stroke and other heat damage.

Improve the bathing environment: The open-air swimming pool is susceptible to environmental factors, such as wind, sand, rain and so on. After covering the canopy room, it can not only block part of the environmental noise, but also effectively resist the intrusion of dust and color particles, greatly improving the customer's bathing environment.

Increase the attraction of the venue: Compared with the ordinary outdoor swimming pool, the swimming pool covered by the canopy in addition to having a better environmental advantage, more unique and chic, can effectively increase the attraction of the venue and brand image. It should be noted that for businesses operating open-air swimming pools, the construction of tents needs to comply with the relevant safety standards and norms to ensure the stability and safety of the tent.

In addition, if the venue is located in the area of storms, lightning and other natural disasters frequent phenomenon, also need to carry out the corresponding safety assessment and preventive measures.

Extended operating time: The summer weather is hot, and the lamps are set up in the evening tent room, which can provide customers with a more comfortable night swimming environment. At the same time, the construction of the canopy can also optimize the lighting conditions, avoid the adverse impact of fine and rainy weather on the operation of the venue, and extend the opening hours to improve earnings.

Improve water quality and cleaning effect: Under the cover of the tent, the pool water can be effectively reduced by external factors, such as leaves, mosquitoes, etc., and then improve the water quality and cleaning effect. It should be noted that the size, facilities, materials and other issues of the tent need to be considered during the construction of the tent to meet the actual needs of the venue and the use of customers. At the same time, businesses also need to comply with relevant regulations and management regulations to ensure the safety and health of business premises.

In addition, when considering the construction of tents, businesses should also take into account the relevant costs and inputs. Specifically, it is necessary to consider factors such as the required cost of tent materials, installation costs, and later maintenance. For some long-standing open-air swimming pools, businesses also need to consider the compatibility between the tent and the facility. Because the establishment of the tent may have requirements for existing facilities, such as water circulation system, drainage system, etc., it is necessary to make relevant adjustments and upgrades in advance.
