Product Description

Eco Winter Outdoor Dome House Waterproof PVC Cover Glamping Dome Geodesic Tent

Product Parameter :

Function	hotel/glamping ceremony ,party ,event ,etc
Hot Sale Size	4/5/6/8/10/12/15/20/25/30/35/40/45/50/60M,custom
Roof Cover	Double PVC Coated Polyester Textile
Ground Situation	Grass Land, Earth Land, Asphalt Ground, Cement Ground
Excellent fire resisirance	High temperature resistance, which meets the high requirements of fire protection.
High security	It has good seismic performance because of its light weight flexible structure and Larger deform-ability.
Good transmittance	The film has excellent anti ultraviolet and anti-aging properties. The surface of membrane is smooth and elastic, so the dust is hard to penetrate. After scouring, it will restore its original clean surface.
Low energy consumption	Long lifespan ,heat insulation ,good self-cleaning properties ,production period is short
Roof Material	850g/sqm black-out white PVC cover
Feature	High quality PVC-coated polyester textile, 100% waterproof, flame retardant to DIN4102 B1, M2, CFM, UV resistant, tear resistant
Frame Material	Strong Galvanized pipe structure with good anti-rust ability

Fixing methods :

First of all, a simple ground treatment scheme can be used when the tent is built on different floors. For example, when building a tent on a flat grass or beach, you can lay a waterproof mat or cloth directly on the ground, and then build a tent frame on it, and then fix the tarp on the frame. This method is simple and quick, and does not require complex treatment of the ground, and the tent can be firmly built on the ground to provide a comfortable use environment.

Secondly, the scheme of adjusting the height can be used when the tent is built on different ground. On the uneven ground, the tent can balance the ground height by adjusting the height of the feet to ensure that the tent can be firmly built. For example, in mountainous, hilly or rugged terrain, canopies can use adjustable height support feet, by adjusting the height of different support feet, so that the tent balance, not affected by the terrain, to ensure the use of safety and comfort.

In addition, the canopy can be built on different floors in a variety of fixed ways. Canopies can be fixed in different ways to ensure stability in different ground conditions.

For example, on hardened floors such as cement floors or sand and gravel floors, canopies can be fixed using bolts, ground nails or wire ropes to ensure that the canopies are firmly fixed on the ground. On the softened ground such as soil or grass, the tent can be fixed using ground nails, piles or ropes to ensure that the tent is not affected by wind or the ground is wet and soft, and maintain stability.

FAQ :

QUESTION:

What is the minimum order quantity?

ANSWER:

MOQ is 100 pcs/ set

QUESTION:

What are the modes of payment?

ANSWER:

Payment options:

Paypal

Western Union

Bank Transfer

(Zhejiang Chouzhou Commercial Bank)

QUESTION:

What are the shipping methods?

ANSWER:

Shipping methods by:

Air

Sea
