SDQ-6m	Ø25	1.5	3.5m	28.26
SDQ-7m	Ø25	2	4.1m	38.47
SDQ-8m	Ø25	2	4.7m	50.24
SDQ-9m	Ø25	2	5.3m	63.59
SDQ-10m	Ø25	2	5.9m	78.50
SDQ-12m	Ø38	2	6m	113.04
SDQ-15m	Ø38	2	7.5m	176.63
SDQ-20m	Ø48	3	10m	314.00
SDQ-25m	Ø48	3	12.5m	490.63
SDQ-30m	Ø60	3	13m	706.50

In the aftermath of a flood, canopies can play several important roles:

Provide temporary shelter: After the flood receded, many houses were destroyed and people's living environment was seriously damaged. Canopies can be built quickly to provide temporary shelter for homeless people and ensure basic living needs.

Set up relief centers: Set up relief centers in disaster areas to provide food, water, medical supplies and other necessary relief items for the affected people. The shelter has the characteristics of flexibility and versatility, and can be quickly transformed into various rescue facilities, such as medical stations, temporary schools, canteens, etc.

Build temporary roads: After floods, roads are often destroyed, making transportation a challenge for disaster recovery. Tents can be built on the damaged road surface to provide temporary roads for disaster areas, ensure the smooth passage of rescue vehicles and equipment, and facilitate the recovery work in disaster areas.

Guarantee living materials: In the recovery stage after the disaster, the tent can be used as a warehouse to store and distribute various living materials, such as food, clothing, daily necessities, etc., to provide necessary help for the people in the disaster area.

With the increasing demand for rapid response and sustainable development, the canopy will have a wider application prospect in the future. It not only plays an important role in flood control and disaster reduction, life rescue and other aspects, but also has great potential in environmental protection, economy and other aspects.

First of all, the tent is a kind of green and environmentally friendly building. Its mobility allows it to be used in different places and environments, thereby reducing the generation of construction waste. At the same time, the construction and demolition of the tent will not cause damage to the environment, in line with the requirements of environmental protection and sustainable development.

Secondly, the canopy has a very high economy. Its quick setup and disassembly feature allows it to be put into use quickly in emergency situations, meeting the needs of temporary sites.

In addition, canopies can be recycled, reducing waste and reducing the cost of disaster recovery. In the face of the challenges after the flood disaster, we must be confident and brave. Tents play an important role in disaster recovery, providing people with essential support such as temporary shelter, relief centers, temporary roads and supplies.

At the same time, the canopy is also a green, environmentally friendly and economical building with great potential. Let us actively use the tent to provide more help and support for the people in the disaster area, and jointly contribute to the reconstruction and future development of the disaster area. I believe that with joint efforts, we will be able to rebuild our beautiful homeland and restore cities and villages full of vitality and vitality.

Packing :

- 1.All steel structure will be packed by air bubble filmplastic protect, because the steel structure easily scratches without protection.
- 2.All fabric will be packed by palstic bag , keep cleaning.
