	Hardness Quality	At Least 250 MPa
	Features of Frame	Stainless, Lightweight, Durable, 4 Channel
	Windload	Up too 120km/h
	Connector	Superior Enclosure with Hot Dip Galvanized Steel
Material of Transparent Top	Material	Translucent PVC Fabric 950g/sqm
	Thickness	≥0.67mm
	Features	Best performances in breaking strength, water-proof, UV-proof, flame retardant (B1 DIN 4102/GB8642)

Many customers who want to buy canopies or long-term rental canopies must have a question to ask us, after the purchase of canopies, whether it is necessary to configure the door, and if the door is configured, what type of door is needed for configuration?

The tent is a very convenient temporary building, which has many uses. For enterprises, because of the low cost of construction, wind and rain prevention, can do a good ventilation system, so the use of the tent is mostly used as a warehouse.

If used as a warehouse, it is necessary to combine products to make requirements for the door. If the product's requirements for the environment are not strict and the ventilation needs of customers, the warehouse can even be opened directly without the door as a configuration, or the door curtain can be hung. If a truck is required to enter, a sliding door can be installed as an entrance. This protects the tarp and keeps out dust.

If it is used as an event in the city, or as a store, conventional glass door frames can be used, such as the use of double doors as the main door and the single door as the side door.

If it is a farm, it is more suitable to use a sliding rail double open wooden door, because the wooden door is easy to wash, low cost, and light and easy to open, which is very suitable for farm warehouses, or livestock breeding tents.

The reasons and functions of the tent before the factory:

The tent is usually composed of metal frame and tarpaulin in structure, which has the characteristics of light weight and convenient construction. However, because the tent needs to be often used outdoors, it is affected by environmental factors (such as wind and rain, sunlight, etc.), which easily leads to the stability and safety of the tent structure. Therefore, testing before the tent factory can effectively check whether the structure of the tent is stable, find and solve potential problems in time, and improve the quality and reliability of the tent.

The specific steps of the tent test are as follows:

Preparation before the trial: determine the trial site, prepare the necessary tools and materials for the trial, and conduct training and safety education for the personnel involved in the trial.

Installation test frame: according to the requirements of the tent design drawings, install the test frame to ensure the stability and accuracy of the frame. The trial effect evaluation mainly includes the following aspects:

Structural stability: Check whether the tent frame is stable, whether there is loosening, deformation and other problems.

Safety: Check the tent for safety hazards, such as tightness, fire performance, etc.

Performance: Evaluate the performance of the tent in actual use, such as load-bearing, insulation, waterproof, etc.

Maintenance convenience: Check whether the maintenance of the tent is convenient, such as cleaning, repair, etc.

Customer satisfaction: Understand customer experience and satisfaction with the tent in order to improve the product.

Install tarpaulin: The tarpaulin is installed on the frame according to the design requirements, paying attention to the tightness and tightness of the tarpaulin.

Installation of internal facilities: according to the design requirements, install internal facilities, such as lamps, power supplies, etc.

Trial build inspection: After the completion of trial build, a comprehensive inspection of the tent, including structure, facilities and other aspects.

Trial effect evaluation: through actual use and testing, the performance of the tent is evaluated to determine its use effect.

FAQ :

1. who are we?

We are based in Guangdong, China, start from 2015, sell to North America(55.00%), Africa(15.00%), Mid East(10.00%), Southeast Asia(10.00%), South America(5.00%), Eastern Europe(5.00%). There are total about 11-50 people in our office.
