8M	2.6M	4.06M	84*48*3MM	
10M	3M	4.32M	122*68*3MM	
15M	3M	5.44M	166*88*3MM	
20M	3M	6.25M	112*203*4MM	
30M	4M	8.87M	120*254*4MM	
50M	5M	13.12M	120*350*5MM	
60M	5M	14.75M	120*400*5MM	

Waterproof	√
UV Resistant	√
Flame Retardant	√
Max. Wind Load	120km/h
Max. Snow Load	75kN/m ²
Working Temperature	-30°C-70°C

Delivery Time

Quantity(Square Meters)	1-300	300-1000	>1000
Est. Time(Days)	10	18	to be negotiated

Details:

Event tents can be made from various materials, each offering different characteristics in terms of durability, weather resistance, aesthetics, and cost. Some common materials used for manufacturing event tents include:

Polyester Fabric: Polyester is a popular choice for event tent canopies due to its durability, lightweight nature, and resistance to tearing and stretching. It can be coated with PVC or other materials for enhanced waterproofing and UV resistance.

Polyethylene (PE): Polyethylene is a type of plastic often used for event tent canopies and sidewalls. It is known for its waterproof properties and affordability, making it a cost-effective option for temporary shelter solutions.

PVC (Polyvinyl Chloride) Fabric: PVC-coated polyester fabric is highly durable and weather-resistant, making it suitable for event tents exposed to harsh outdoor conditions. PVC fabric provides excellent waterproofing and UV protection.

Vinyl: Vinyl is a heavy-duty material commonly used for larger event tents or structures requiring high strength and durability. It offers superior waterproofing, UV resistance, and longevity compared to other materials.

Canvas: Canvas tents offer a traditional and aesthetically pleasing option for events. Canvas is breathable, which can help regulate temperature inside the tent, but it may require additional waterproofing treatments for outdoor use.

Nylon: Nylon is lightweight and strong, making it suitable for event tent canopies. While not as durable as polyester or vinyl, nylon is often used in smaller tents or temporary structures.

Aluminum: While not a fabric material, aluminum is commonly used for tent frames due to its lightweight, strength, and resistance to corrosion. Aluminum frames provide stability and support for the tent structure.

Steel: Steel is another material used for tent frames, particularly in larger or more permanent structures where additional strength and stability are required. Steel frames are durable but may be heavier and more prone to corrosion than aluminum frames.

FAQ :

1. who are we?

We are factory,based in Guangdong, China.

2. how can we guarantee quality?

Always a pre-production sample before mass production;

Always final inspection and installation test before shipment;

3.what can you buy from us?

Aluminum A Frame Tent,Pagoda Tent,Geodesic Dome Tent,Arcum Tent,TFS Curved Tent and Membrane Structure Tent.

4. why should you buy from us not from other suppliers?

1.many years tent manufacturing experience ;

2.Professional engineer customized design ;
