certificate	CE
Payment terms	T/T,West union
application	Events,performances,party,catwalkshow,concert, exhibiton and convention,hotel,outdoor activies, dj, etc.

Deatails:

Difference between 30mm thickness stage and 18mm thickness stage :

1. Loading capacity : 18mm thickness -----700kg/sq.m

30mm thickness -----900kg/sq.m

30mm thickness is much more firm and could load more.

2.Different lock system :

30mm thickness fixed by hex key . 18mm thickness fixed by lock.

Features:

Size: Concert stages come in various sizes to accommodate different types of performances and venues. They can range from small stages for intimate shows to large stages for stadium concerts.

Construction: Concert stages are typically constructed using sturdy materials such as steel or aluminum trusses and platforms. The construction should be robust enough to support the weight of performers, equipment, and stage props.

Height: Concert stages are often elevated to provide better visibility for the audience. The height of the stage can vary depending on the venue and the type of event.

Backdrop: Many concert stages feature a backdrop or backdrop panels that can be used to display branding, logos, or visuals related to the performance.

Lighting and Sound: Concert stages are equipped with lighting and sound systems to enhance the performance and create the right atmosphere. These systems may include stage lighting, spotlights, speakers, and audio equipment.

Accessibility: Concert stages should be accessible to performers, crew members, and technical staff. This may include backstage areas, dressing rooms, and equipment storage areas.

Safety Features: Safety is a critical consideration for concert stages. They should be designed and built to meet safety standards and regulations to prevent accidents and ensure the well-being of performers and audience members.
