Construction:

Geodesic dome event tents are constructed using a network of interconnected struts or rods arranged in a geodesic pattern, creating a series of triangular or polygonal panels. This structural design provides strength, stability, and load-bearing capacity, allowing the tent to withstand wind, snow, and other weather conditions.

The frame of the dome tent is typically made from high-strength materials such as aluminum alloy or galvanized steel, while the cover is made from durable, weather-resistant fabric such as PVC-coated polyester or vinyl.

FQA:

Q1: Are you Factory?

A: Yes, We are a professional Manufacturer,has been in design, produce and export outdoor products.

Q2: How is the quality of your product?

A: We use environmental raw material, supply for several big supermarket, quality is reliable.
