1. Fast investment, 2-3 months money back
2. Logo customized
3. Fast delivery time
4. Provide professional product pictures
5. Provide installation video

Material	membrane structure
Function	Sun block , Waterproof , Windproof , Breathable
Size Option	3X3m 3X4m 4X4m 6x4m OR Customized
Color Option	Dark Grey / White Or Customized

Materials:

Polyester Fabric: Polyester fabric is a popular choice for custom canopy tents due to its durability, affordability, and versatility. It can be treated with coatings or laminates to enhance weather resistance, UV protection, and flame retardancy. Polyester fabric is available in a wide range of colors and can be printed with custom graphics, logos, and designs.

Polyvinyl Chloride (PVC) Fabric: PVC-coated polyester fabric is known for its exceptional durability and weather resistance, making it suitable for outdoor use. PVC fabric provides excellent waterproofing, UV protection, and flame retardancy, ensuring that the canopy tent remains sturdy and functional in various weather conditions. It is often used for commercial-grade canopy tents and custom applications where longevity and performance are critical.

Vinyl Fabric: Vinyl fabric, also known as PVC vinyl or PVC laminated fabric, is a heavy-duty material commonly used for industrial-grade canopy tents and commercial applications. It offers superior strength, tear resistance, and weatherproofing properties, making it ideal for long-term outdoor use. Vinyl fabric is available in different thicknesses and finishes, including glossy or matte surfaces.

Canvas: Canvas fabric is a traditional material known for its natural look and breathability. While not as common as polyester or PVC fabric, canvas can be used for custom canopy tents, particularly for applications where aesthetics and environmental sustainability are prioritized. Canvas tents may require additional treatment or coatings to enhance water resistance and durability.

Mesh Fabric: Mesh fabric is a lightweight and breathable material commonly used for canopy tents designed for outdoor events, trade shows, and promotional activities. Mesh fabric allows for airflow and visibility while providing some protection from sun and light rain. It is often used for custom canopy tents with printed graphics or branding.

Acrylic Fabric: Acrylic fabric is a durable and weather-resistant material commonly used for high-end canopy tents and architectural structures. It offers excellent UV resistance, colorfastness, and mold resistance, making it suitable for long-term outdoor use. Acrylic fabric is available in a wide range of colors and patterns, providing options for customizing the appearance of the canopy tent.

Aluminum or Steel Frame: In addition to the canopy fabric, the frame of a custom canopy tent is typically constructed from aluminum or steel for strength and stability. Aluminum frames are lightweight, corrosion-resistant, and easy to transport, while steel frames offer additional durability and load-bearing capacity for larger tent structures.

FQA:

Q: What are your membrane structure sizes in your factory?

A: Our standard sizes are 3x5M,6x6M. Special sizes with big quantity can be negotiated.

Q: What is your membrane structure delivery time in your factory?

A: Our regular delivery time is 20-35 days for normal order quantity. It is subjected to our final confirmation for big order more than 100 m².

Q: Can we make customized power coating colors for membrane structure?

A: yes. we can and MOQ should reach 100 m².

Q: Can you offer high definition photos and specifications for our local market advertisement?

A: Yes. we can.

Q: Are your membrane structure easy for end user to install?

A: yes. We will have 24-hour online customer service guidance for your installation
