Max allow wind speed	100km/hour
Size	Customized Size
Pole Material	Flexible Poles,aluminium Alloys
PVC function	Water proof / Fire-proof/Self-cleaning

Here's a breakdown of the materials commonly used for each component:

Aluminum Alloy Frame:

Aluminum Alloy: The frame of aluminum alloy event marquee tents is primarily made from aluminum alloy. Aluminum alloys are lightweight yet strong materials that offer excellent structural integrity and durability. They are resistant to rust, corrosion, and degradation, making them ideal for outdoor applications. The aluminum alloy used in tent frames is often treated or anodized to enhance its strength and longevity.

Canopy Material:

Polyvinyl Chloride (PVC) Coated Polyester: The canopy material of aluminum alloy event marquee tents is typically made from polyester fabric coated with PVC (Polyvinyl Chloride). This PVC-coated polyester fabric offers exceptional durability, weather resistance, and flame retardancy. It provides protection from rain, wind, sun, and snow, ensuring that event attendees remain comfortable and safe regardless of the weather conditions outside.

Polyethylene (PE): In some cases, the canopy material may be made from polyethylene (PE) fabric, which is also durable, waterproof, and UV-resistant. PE fabric is commonly used in budget-friendly tent options or for applications where lightweight and easy transport are priorities.

System Features:

- 1.Four channel aluminum frame, hard pressed extruded reinforced aluminum
- 2.With extra eave/ridge braces to strengthen the frame over 20m span width
- 3.No poles inside, 100% interior space is available
- 4.Galvanized steel connection parts
- 5.Fabric is fire retardant and NFP92-507 standard approved by SGS
- 6.Bar tensioning roof system
- 7.Interchangeable parts between sizes
- 8.Wind load 100km/h
- 9.Full accessories available such as hard solid wall system,glass door units etc.

FAQ:

1: Are you a trading company or manufacturer?

We are manufacturer, so we can give you competitive prices.
