Certificates	CE Certificate
Feature	Excellent fire resisirance,High temperature resistance
Fabric Material	850g/sqm white PVC cover Wall Material
Color	Customized Color
Frame material	Aluminum 6061 / T6
Side Wall	Soft PVC Walls,ABS wall,glass wall
Logo	Accept Customized Logo

Details:

Here are some common materials used in the construction of custom canopy tents:

Polyester Fabric: Polyester is a popular choice for canopy tent tops due to its durability, water resistance, and ability to hold vibrant colors when printed with custom designs or logos. It's relatively lightweight and easy to handle, making it suitable for portable and promotional canopy tents.

Vinyl/PVC Fabric: Vinyl or PVC-coated polyester fabric is another common material used for canopy tent tops. It offers excellent waterproofing and UV resistance, making it suitable for outdoor events and long-term use. Vinyl canopies are often preferred for commercial and industrial applications where durability is paramount.

Canvas: Canvas is a heavy-duty fabric known for its strength and durability. While it may be less common for custom canopy tents, canvas can provide excellent protection against the elements and has a classic aesthetic appeal. It's often used for upscale or luxury events where appearance is important.

Polyethylene (PE) or Polypropylene (PP): These lightweight and affordable materials are commonly used for canopy tent sidewalls and canopies. While not as durable as polyester or vinyl, they offer adequate protection from light rain and sun exposure. PE and PP materials are often used for budget-friendly or temporary canopy tents.

Aluminum Frame: The frame of a custom canopy tent is typically constructed from lightweight yet sturdy materials such as aluminum. Aluminum frames offer strength and stability while remaining lightweight and easy to transport. They are resistant to rust and corrosion, making them suitable for outdoor use.

Steel Frame: For heavy-duty or commercial-grade canopy tents, steel frames may be used to provide maximum stability and durability. Steel frames are stronger than aluminum but are heavier and may require more effort to set up and transport.

Fiberglass Frame: Fiberglass frames are lightweight and flexible, making them suitable for smaller canopy tents or those designed for occasional use. While not as strong as aluminum or steel, fiberglass frames are resistant to rust and corrosion.

Plastic Components: Various plastic components, such as connectors, joints, and feet, are used to assemble and reinforce canopy tent frames. These components are often made from high-density polyethylene (HDPE) or other durable plastics to withstand wear and tear.

Packing

Selling Units: Single item

Single package size: 170X55X70 cm

Single gross weight: 400.0 KG

Package Type:A: Aluminum Frame Packed In Membrane Film

B:Hardware Packed In Solid Carton

C:Roof In Professional PVC Bag

D:All in one plywood box

FAQ:

***Q1.Does your company is a factory?**

A:Yes, we are a directly factory, We assure you all prices are based on factory.
