Key feature:

Durable bonding properties; Scrape coating technology uses the physical and chemical bonding of liquid PVC and fiber to directly scrape the paste onto the fabric;

Strong welding performance: the welded fabric can withstand a lot of tension, even in the harsh environment such as frequent operation of hurricanes, it will not affect the sealing degree of the welding;

Durable service life: a certain thickness not only gives the blade coating fabric good UV resistance, but also extends the service life of the product; Good color fastness: Because the pigment is directly immersed in the PVC coating, the razor coated fabric can keep the color bright as new. Anti-corrosion, anti-mold, anti-ultraviolet and flame retardant (M2 and B1) and other properties are up to international standards, properly used and preserved, there will be no rot and mildew within three to five years.
