Here's a breakdown of each material:

Aluminum Frame:

The frame of industrial aluminum storage tents is constructed primarily from aluminum alloy. Aluminum alloys are chosen for their lightweight yet durable properties, making them ideal for supporting large tent structures.

The aluminum frame components, such as poles, beams, and connectors, are engineered to provide structural stability and resistance to bending or deformation.

The aluminum frame is often treated or coated to enhance corrosion resistance, ensuring long-term durability even in outdoor environments exposed to moisture and other elements.

Fabric Cover:

The fabric cover of industrial aluminum storage tents is typically made from high-quality materials such as PVC (polyvinyl chloride) or polyester with PVC coating.

PVC fabric is known for its durability, weather resistance, and UV protection. It is also waterproof and can withstand exposure to rain, snow, and sunlight without deteriorating.

Polyester fabric with PVC coating offers similar benefits, providing strength, flexibility, and resistance to tearing and abrasion.

The fabric cover is designed to fit snugly over the aluminum frame, providing a protective enclosure for stored items while allowing for ventilation and natural light transmission.

FQA:

Q: How to choose the size of tents?

A: The size depends on how many people you want to sit, stand or have dinner in the tent. Normally, we advise 0.8-1.2 sqm/person

Q: What is the service life of the tents?

A: Our tent framework can be used more than 20 years, and 8-10 years for PVC fabric depend on conditions of usage. Good discount will be given you to get a new fabric from us.

Q: How to assemble your tents?

A: We will provide the manual and video for you to study. If you need, we can send a technician to help you in your country.

Q: What is the warranty and safe of your tent?

A: Aluminum frame tent is made by European standards. We own TUV, SGS quality management system certification and fire resistant test for fabric.
