*Sidewalls	Pe woven tarp 160gsm, waterproof and UV resistant
*Steel Frame	Dia 38*1.0/42*1.4mm Galvanized tubes
*Packing	Strong carton packing

Details:

Here's a general guide on how to install a party tent with sidewalls:

Select a Suitable Location: Choose a flat and level area for the tent setup, free from obstructions such as trees, poles, or uneven ground. Ensure that there is ample space around the tent for anchoring and access.

Unpack and Lay Out the Components: Unpack the tent components and lay them out on the ground. This includes the tent frame, canopy, sidewalls, stakes, ropes, and any other accessories included with the tent.

Assemble the Tent Frame: Begin by assembling the tent frame according to the manufacturer's instructions. This typically involves connecting the frame poles and fittings together to form the basic structure of the tent.

Attach the Canopy: Once the tent frame is assembled, drape the canopy over the frame and secure it in place using the provided fasteners or straps. Ensure that the canopy is evenly stretched and centered over the frame to provide proper coverage.

Install the Sidewalls: Attach the sidewalls to the tent frame, starting with the end walls and then the side walls. Secure the sidewalls to the frame using the provided hooks, clips, or Velcro straps. Ensure that the sidewalls are properly aligned and tightened to prevent flapping in the wind.

Anchor the Tent: Secure the tent to the ground using stakes, anchors, or weights to provide stability and prevent movement or tipping. Drive the stakes or anchors into the ground at an angle, ensuring that they are firmly anchored and spaced evenly around the perimeter of the tent.

Secure the Sidewalls: Once the tent is anchored, secure the sidewalls to the ground using ropes or straps attached to the bottom of the sidewalls. This helps prevent the sidewalls from billowing in the wind and provides additional stability to the tent structure.

Adjust and Fine-Tune: Adjust the tension of the canopy and sidewalls as needed to ensure a tight and secure fit. Check for any loose or sagging areas and make adjustments as necessary to ensure proper installation.

Final Inspections: Perform a final inspection of the tent and sidewalls to ensure that everything is properly installed and secure. Check for any signs of damage or wear and address any issues before proceeding with the event.

Optional Additions: Depending on the tent design and specifications, you may also need to install additional accessories such as flooring, lighting, heating, or decorations to complete the setup.

Why do I buy clear span tent?

- 1.We have the strict rule for raw material inspection and control when they are sent to warehouse
- 2.We have QC inspect on production line all the time.
