5x6	22	Just one bedroom	1~2 people
6x7	32	One bedroom and one bathroom	1~2 people
8x9	46	Two bedroom and one bathroom	2~4 people

Design and Aesthetic Appeal:

Snail-inspired Architecture: These tents feature a distinctive, curved shape reminiscent of a snail's shell. The design not only adds visual interest but also maximizes interior space and enhances airflow.

Durable Materials: Typically, snail shape glamping tents are constructed from durable and weather-resistant materials such as canvas, reinforced with sturdy frames to withstand various climates and conditions.

Luxurious Interiors: Inside, the tents are outfitted with premium amenities including comfortable beds, quality linens, cozy furnishings, and often include en-suite bathrooms with modern fixtures.

Why use membrane structure material?

PVDF membrane structure material used in membrane structure construction is a kind of film material with good strength and flexibility. It is made of fiber woven into fabric substrate and processed with resin as coating material on both sides of the substrate. The fixed material, the central fabric substrate is divided into polyester fiber and glass fiber, and the resin used as the coating material is polyvinyl chloride resin (PVC), silicone and polytetra fluoroethylene resin (PTFE). In terms of mechanics, the fabric substrate and the coating material respectively have the following functional properties.

Fabric substrate - tensile strength, tear strength, heat resistance, durability, fire resistance.

Coating material - weather resistance, antifouling, processability, water resistance, resistance to products, light transmission.
