Cover	Double PVC-Coated Polyester
Feature	Waterproof UV-resistance Flame Retardant
Frame material	High-strength Seamless Steel Tube with Stoving Varnish
Wind load	100km/h
Snow load	70kgs/sqm

Construction procedure

Unframe the tent

The individual parts of the tent frame are carefully removed from the packaging and assembled according to the instructions. The main arched frame is usually built first to ensure that each connection point is strong and reliable. Tools such as wrenches can be used to tighten screws or connectors.

Fixed tarpaulin

Place the tarpaulin carefully over the frame, making sure the tarpaulin is positioned correctly and fits the frame perfectly. Starting at the bottom of the tent, use ropes or clamps to secure the tarp to the frame. Step up and secure the tarpaulin to make sure it is flat and wrinkle-free.

Install floor nails and pull ropes

On all sides of the tent, insert ground nails at a certain angle and distance. The ground peg should be inserted deep enough into the ground to ensure the stability of the tent.

Connect the rope to the tent's fixed points and ground nails, and use the rope tightener to adjust the length of the rope to make the tent more stable. Pull the rope at a reasonable angle to avoid being too loose or tight.

Check and adjust

After the construction is completed, carefully check the various parts of the tent to ensure that the frame is strong, the tarpaulin is not broken, and the ground nail and pull rope are fixed reliably.

Make fine adjustments to the tent, such as adjusting the position of the tarp, tightening the rope, etc., to ensure that the appearance and stability of the tent reach the best state.

Interior arrangement

According to the needs of the hotel, carry out the internal layout, such as placing beds, furniture, decoration, etc. Install lighting, power outlets, etc., to provide guests with a comfortable living environment.

Accessories
