

All Season Enclosed Aluminum Party Marquee Tent South Africa Winter Event Hall

Our Product Introduction

Basic Information

- Place of Origin: Guangzhou, Guangdong, China
- Brand Name: Marquees Tent
- Certification: ISO 9001:2015, CE, SGS
- Model Number: AMT-ZA-400
- Minimum Order Quantity: 1 Set
- Price: USD 820-4,600 / Set
- Packaging Details: Waterproof woven bag + wooden pallet, seaworthy export packing for sea freight to Durban or Cape Town
- Delivery Time: 7-15 days for standard sizes, 15-30 days for custom orders
- Payment Terms: T/T, L/C, Western Union, PayPal
- Supply Ability: 500 Sets per Month

Product Specification

- Wall System: Full Enclosure Solid PVC Walls + Clear Window Panels
- Insulation Option: Thermal Lining Ceiling & Wall Liners
- Heating Compatibility: Heater Points And Chimney Flue Openings Available
- Door Options: Roll-Up Doors, French Doors, Zippered Entrances
- Frame Material: Aluminum Alloy 6061-T6, Anodized Finish
- Cover Material: 850g Double-Sided PVC Tarpaulin
- Available Widths: 5m / 8m / 10m / 15m / 20m / 25m
- Available Lengths: Custom, In 3m Or 5m Bay Modules
- Waterproof Rating: 100% Waterproof, Heat-Sealed Seams
- Wind Load: 80-100 Km/h
- Frame Lifespan: 10-15 Years With Normal Maintenance
- Fire Rating: DIN 4102 B1 / M2
- Highlight: **All Season Party Marquee Tent ,**

Product Description

All-Season Enclosed Aluminum Party Marquee - A Year-Round Event Hall for South Africa

South African winters are beautiful - and cold. Johannesburg's highveld nights drop below freezing between June and August, while Cape Town's winter brings cold rain and wind. Yet weddings, corporate functions and community events continue all winter. The **all-season enclosed aluminum party marquee tent** turns any outdoor space into a warm, dry, fully enclosed event hall.

Start with our aluminum alloy frame and waterproof peak roof. Add the **full PVC enclosure system** - solid walls, clear windows, roll-up or French doors - and you have a weather-tight building. Add the optional thermal lining ceiling and wall liners, connect a heater through the dedicated flue opening, and your winter wedding venue is warmer than many permanent halls.

One tent, four seasons: open-sided in summer, fully enclosed in winter, and everything in between. That is what makes this the smartest investment for South African event venues and hire companies.

Key Features

Complete Enclosure System: Solid PVC walls, clear window panels, roll-up doors and zippered entrances convert the tent into a sealed hall in under an hour.

Thermal Lining Option: Insulating ceiling and wall liners trap heat inside, cutting heating costs dramatically for winter events.

Heating-Ready Design: Dedicated heater flue openings and mounting points - connect professional heating safely without cutting the cover.

Clear Window Panels: Natural daylight and views while fully enclosed - no cave-like atmosphere, even in mid-winter.

Wind & Rain Sealed: 100% waterproof roof plus anchored walls keep the interior dry and draft-free through Cape winter storms.

Year-Round Usability: Open-sided configuration for summer, enclosed for winter - one asset that earns revenue all 12 months.

Rust-Free Frame: Anodized aluminum handles winter dampness and condensation without corroding.

Flexible Layouts: Multiple door positions and partition walls let you create entrance halls, cloakrooms and breakout spaces.

The Winter Event Opportunity in South Africa

Business insight: Winter is not a dead season in South Africa - it is an underserved one. Venues with enclosed, heated marquees win winter wedding bookings, corporate functions and church events that open-sided competitors must refuse.

Highveld Freezing Nights (Gauteng): June-August nights regularly drop below 0°C. An enclosed, heated marquee keeps events comfortable while guests arrive in jackets and leave impressed.

Cape Town Winter Rain: May-August brings cold fronts and rain. Our fully enclosed system with sealed walls and drainage keeps the interior bone-dry.

Winter Wedding Season: Winter wedding venues are in demand - and scarce. An enclosed marquee on a wine estate or farm becomes a premium winter venue overnight.

Year-Round Hire Revenue: Hire companies with enclosed tents can quote winter events their competitors cannot serve - a direct competitive advantage.

Load-Shedding Friendly: Tents need no power to stand; heating can run on gas or generator, keeping winter events warm through load shedding.

Condensation Management: Our ventilation design and thermal liners minimize condensation - a common problem in uninsulated winter tents.

Technical Specifications

Specification	Detail
Wall System	Full Enclosure Solid PVC Walls + Clear Window Panels

Specification	Detail
Insulation Option	Thermal Lining Ceiling & Wall Liners
Heating Compatibility	Heater Points and Chimney Flue Openings Available
Door Options	Roll-Up Doors, French Doors, Zippered Entrances
Frame Material	Aluminum Alloy 6061-T6, Anodized Finish
Cover Material	850g Double-Sided PVC Tarpaulin
Available Widths	5m / 8m / 10m / 15m / 20m / 25m
Available Lengths	Custom, in 3m or 5m Bay Modules
Waterproof Rating	100% Waterproof, Heat-Sealed Seams
Wind Load	80-100 km/h
Frame Lifespan	10-15 Years with Normal Maintenance
Fire Rating	DIN 4102 B1 / M2

Applications

Winter weddings and receptions
 Corporate year-end and mid-year functions
 Church winter conferences and events
 Outdoor markets and winter festivals
 School and university winter functions
 Sports club prizegivings and dinners
 Temporary dining halls for lodges and resorts
 Community halls for winter programs

Why Buy Direct From Our Factory

10+ Years of Specialized Experience: Our factory has designed and manufactured aluminum alloy marquee tents since 2013, delivering 5,000+ structures to clients across Africa, the Middle East, Europe and Southeast Asia.

Certified Production & Quality Control: ISO 9001:2015 certified workshop. Every frame batch is weld-tested and every PVC cover is water-tested before packing, so what arrives in South Africa is ready to erect.

Aluminum Alloy Engineering Expertise: We build with 6061-T6 and 6082-T6 aluminum profiles - the same alloy family trusted in aerospace structures - anodized or powder-coated to resist corrosion in coastal and highveld climates.

Proven South Africa Export Record: Regular sea freight shipments to Durban and Cape Town ports with complete export documentation, fumigation certificates and seaworthy packing that clears SARS customs smoothly.

In-House Design & Structural Calculation: Every configuration is checked with CAD structural analysis - wind load, span, anchoring - before production begins. No guessing, no cutting corners.

Responsive After-Sales Support: Spare parts supply, assembly drawings, video guidance and 24-hour replies to technical questions from our export team.

Frequently Asked Questions

Q: How warm does the tent stay in winter? A: With the thermal lining and a suitable heater, interiors can stay 10-15°C warmer than outside - comfortable for a 0°C highveld night. Exact performance depends on size and heating capacity, which we help you specify.

Q: Can the walls be removed in summer? A: Yes - the enclosure panels zip off and store away, converting the tent back to an open-sided summer venue in under an hour.

Q: Are the clear windows really see-through? A: Yes, the window panels are made of clear PVC that stays transparent, giving natural light and views while keeping wind and rain out.

Q: Can I use a gas heater inside? A: Yes, with the dedicated flue opening and proper ventilation. We provide guidance on safe heater placement and clearances.

Q: Does condensation form on the roof in winter? A: Our thermal lining and ridge ventilation are designed to minimize condensation - a common problem in uninsulated tents.

Q: How long does it take to fully enclose the tent? A: Adding the full wall system to an erected frame takes 2-3 workers roughly one hour for a 10m x 20m tent.

Simple 4-Step Ordering Process

- 1 Inquiry:** Send us your required size, quantity and event type via Email or WhatsApp.
- 2 Proposal:** Within 24 hours you receive a CAD layout, structural specification, quotation and freight estimate.
- 3 Production:** 7-15 days for standard sizes, 15-30 days for custom printing or special configurations, with production photos before shipment.
- 4 Delivery:** Seaworthy packing, full shipping documents, and remote assembly guidance until your tent is standing.
