

Custom Branded Printed Party Marquee Tent for Istrian Wine Festival Events

Our Product Introduction

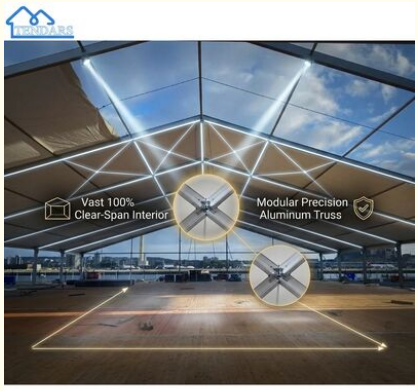

Basic Information

- Place of Origin: Guangdong, China
- Brand Name: Tendars
- Certification: CE, ISO 9001, EN 13782, DIN 4102 B1 fabric
- Model Number: TD-PMT-08
- Minimum Order Quantity: 1 set
- Price: USD 25 - 95 per square meter
- Packaging Details: Frame in bundles by assembly order, fabric folded with interleaving, fittings in labelled crates
- Delivery Time: 15-25 working days after drawing confirmation
- Payment Terms: T/T 30% deposit, balance before shipment; L/C at sight
- Supply Ability: 12000 square meters per month

Product Specification

- Frame Material: Hard-pressed Extruded Aluminum 6061/T6
- Frame Profile: 64 / 82 / 100 / 120 Mm Series By Span
- Roof Fabric: 650-850 G/sqm Double PVC-coated Polyester
- Side Wall: PVC, Clear PVC, Glass Panel, Mesh, ABS Hard Wall
- Wind Load: Engineered Configuration With Written Operating Limits
- Snow Load: Steeper Pitch And Reduced Purlin Spacing Options
- Fire Retardant: DIN 4102 B1 / EN 13501 B-s1,d0 On Request
- Application: Istrian Wine And Food Festivals
- Warranty: 5 Years Frame, 2 Years Fabric
- Service: Shop Drawings, Supervisor Installation, Lifetime Spares
- Highlight: **Custom Printed Party Marquee Tent**,

Product Description

A wine festival is a branding event that happens to serve wine. Visitors photograph the tent long before they photograph the glass, and a plain white structure in a row of decorated competitors disappears from the feed. A branded marquee turns the building itself into signage: printed gables announce the producer, wall graphics carry the label story, and the interior layout guides visitors past a tasting sequence rather than letting them wander.

Printing on a marquee is not the same as printing a banner. Panels are tensioned, exposed to sun and rain, and folded for transport, so the ink and the substrate have to survive handling. We specify PVC panels with a print-friendly top coat and full-bleed artwork prepared at panel scale, so seams fall on structural lines rather than through a logo or a face.

Key Features and Selling Points

- **Full-bleed printed panels:** Gables and walls print edge to edge with artwork aligned to panel seams and structural lines.
- **Print friendly substrate:** Top-coated PVC holds ink through folding, tensioning and repeated seasonal use without cracking.
- **Replaceable graphics:** Individual printed panels can be updated for a new vintage or campaign without replacing the tent.
- **Tasting layout support:** Wall and gable openings can be positioned to create serving counters, entry portals and flow between zones.
- **Weather resistant inks:** UV stable inks resist fading across a full outdoor season on the Istrian coast and inland.
- **Sponsor panel system:** Interchangeable sponsor panels allow multiple partners to be displayed on the same structure.

Technical Specifications

Parameter	Specification
Printing	Full-bleed digital print on coated PVC panels
Artwork	Panel-scale files, seam aware layout
Ink durability	UV stable, outdoor season rated
Reuse	Individually replaceable printed panels
Frame material	Hard-pressed extruded aluminum alloy 6061/T6, anodized finish
Frame profile series	64 mm / 82 mm / 100 mm / 120 mm square profiles by span
Bay spacing	3 m / 4 m / 5 m modular bays, extendable at any time
Eave height options	2.5 m to 4 m clear height, higher on request
Roof fabric	650 g / 750 g / 850 g per sqm double PVC-coated polyester, blackout available
Side wall options	Solid PVC, clear PVC, glass panel, mesh, glass door, ABS hard wall
Fire performance	Fabric meeting DIN 4102 B1 / EN 13501 B-s1,d0 on request
Wind load guidance	Engineered configuration by site exposure, documented operating limits
Snow load guidance	Steeper pitch and reduced purlin spacing for snow regions
Temperature range	-30 C to +70 C service range for fabric and frame
Design life	15 years frame, 8 to 10 years fabric under normal use
Warranty	5 years on aluminum frame structure, 2 years on PVC fabric

All values are configuration dependent. Final specifications are confirmed on the approved drawing before production.

Configuration Guide for Croatian Buyers

Use the table below to match the structure to your site exposure and event type. Our engineers confirm the final configuration against photographs of the ground, the prevailing wind direction and the event duration.

Duty level	Typical use	Recommended build
Light duty	Garden parties, short events, sheltered inland sites	64 mm profile, alternate bay bracing
Standard duty	Weddings, corporate functions, coastal towns in summer	82 mm profile, cross-braced bays, mixed walls
Heavy duty	Exposed coast, island venues, public events, winter use	100-120 mm profile, full bracing, engineered anchors

Applications

Wine and food festivals use branded marquees for tasting halls, producer stands, cooking demonstration areas, VIP lounges and covered dining. Wineries order them for harvest events and cellar door hospitality, while tourism boards use them for regional promotion at fairs. The same system works for beer festivals, olive oil tastings and agricultural shows where regional identity is part of the sales message.

Artwork and Layout Guidance for Producers

The most common artwork mistake is designing for a flat rectangle and forgetting that a marquee gable is a triangle with a curved edge. We ask for artwork at panel scale with safe margins marked, and we review every file before print so logos do not land on a seam or disappear into a corner cut. A short review at this stage costs nothing; a reprinted gable close to the event does not.

Layout matters as much as print. For tasting events we recommend a one-way visitor flow: entry portal, welcome wall with the producer story, a serving counter along one side, and a seated tasting area at the far end. This simple sequence increases the time visitors spend inside and gives staff a natural place to start a conversation about the wine rather than waiting for a question.

Why Croatian Event Buyers Work With Tendars

Every project starts with an engineering question rather than a catalogue page: what wind will this structure see, what ground will it stand on, and how long will it stay up. Our technical team reviews site photographs, exposure and event duration before a configuration is proposed, and the recommendation is issued as a drawing set that a venue manager or a safety officer can actually read.

The factory behind that advice is vertically integrated. Aluminum profiles are cut, machined and welded in house, PVC panels are welded on our own high-frequency lines, and every frame is trial assembled before it is packed. Because we control both the metal and the membrane, a buyer gets one supplier responsible for fit, tension and finish instead of two parties pointing at each other when a panel does not line up.

Documentation is part of the product. Shipments include shop drawings, the packing list matched to crate labels, an installation sequence and a maintenance sheet, and we retain the drawings so that repeat orders match the first delivery exactly. For public events, hotel terraces and protected sites we also prepare the fire performance and anchoring paperwork that local inspections typically request.

Notes for the Croatian Market

Most Croatian event enquiries arrive with three requirements: the structure must look right for a coastal or heritage setting, it must stand up to wind that arrives without warning, and it must be installed inside a tight access window. We address these in the quotation stage rather than after the order, which is why our proposals include anchoring options, installation crew guidance and a delivery sequence suited to ferry timetables and old town access restrictions.

Documentation matters too. Public events, hotel terraces and protected sites increasingly require fire performance evidence and a clear anchoring plan. We prepare those documents with the order so the organiser can answer a venue or an inspection without delay, and we keep the drawings on file for repeat orders so the second season is faster than the first. For Istrian wine and food festivals, that translates into a specification we confirm on the drawing, a delivered price to the Croatian port and a build sequence the local crew can follow without supervision.

Frequently Asked Questions

- **What lead time should we plan for a summer event?** Allow 15 to 25 working days for production after drawings are approved, plus shipping time to the port. For spring installations we recommend confirming drawings in winter, because factory slots fill quickly once the European event season begins.
- **Is installation included in the price?** The quotation states clearly what is included. For larger or exposed sites we can send a supervisor for the first installation, and we always provide the drawing set, the labelled packing list and the build sequence so a local crew can complete the work.
- **How do you handle damage discovered after delivery?** Send photographs of the part and its label, and our team confirms within one working day whether it can be repaired locally or replaced from stock. Because every panel and fitting is individually orderable, a single damaged piece never removes a whole structure from service.

Packaging and Quality Assurance

Packing follows the build sequence rather than the shape of the components: the frame and roof bundle that closes the structure against weather is loaded last so it can be unloaded first. Fabric panels travel folded with interleaving to prevent abrasion in transit, and fittings are boxed by assembly stage so nothing has to be sorted on site.

Each crate is weighed, labelled and photographed before loading, and the photographs are sent with the shipping documents. That record settles most transit questions quickly and tells the receiving crew exactly what should be on the pallet before they sign for it.

Request a Quotation

Send us your site location, expected guest numbers, event dates and ground surface, and we will return a configuration proposal with anchoring options, installation guidance and a delivered price to your Croatian port or site. Samples of fabric and frame profiles can be couriered on request.
