

Luxury Lined Aluminum Party Marquee Tent for Gala Dinner Award Ceremonies

Our Product Introduction

Basic Information

- Place of Origin: Guangdong, China
- Brand Name: Tendars
- Certification: CE, ISO 9001, EN 13782, DIN 4102 B1 fabric
- Model Number: TD-PMT-11
- Minimum Order Quantity: 1 set
- Price: USD 25 - 95 per square meter
- Packaging Details: Frame in bundles by assembly order, fabric folded with interleaving, fittings in labelled crates
- Delivery Time: 15-25 working days after drawing confirmation
- Payment Terms: T/T 30% deposit, balance before shipment; L/C at sight
- Supply Ability: 12000 square meters per month

Product Specification

- Frame Material: Hard-pressed Extruded Aluminum 6061/T6
- Frame Profile: 64 / 82 / 100 / 120 Mm Series By Span
- Roof Fabric: 650-850 G/sqm Double PVC-coated Polyester
- Side Wall: PVC, Clear PVC, Glass Panel, Mesh, ABS Hard Wall
- Wind Load: Engineered Configuration With Written Operating Limits
- Snow Load: Steeper Pitch And Reduced Purlin Spacing Options
- Fire Retardant: DIN 4102 B1 / EN 13501 B-s1,d0 On Request
- Application: Gala Dinners And Award Ceremonies
- Warranty: 5 Years Frame, 2 Years Fabric
- Service: Shop Drawings, Supervisor Installation, Lifetime Spares
- Highlight: **Lined Aluminum Party Marquee Tent**,

Our Product Introduction

Product Description

At a gala, guests should not be able to see how the room was built. They should see light, drapery, table settings and each other. A luxury lined marquee hides the structure completely: the aluminum frame disappears behind pleated wall and roof linings, cables are routed inside the lining cavity, and lighting is integrated so that no fixture hangs from a visible beam.

Lining quality is measured in details that photographs reveal later. Pleats must be evenly spaced, seams must align with the room's symmetry, and the junction between wall and roof lining must be closed rather than gaping. Our linings are made to the frame's actual bay dimensions, with pleat spacing set at the design stage so the finished room looks intentional from every angle.

Key Features and Selling Points

- **Full pleated wall and roof lining:** Ivory or white pleated linings conceal the frame entirely and give the room a permanent, hotel-like finish.
- **Concealed cable routes:** Lighting and AV cabling runs inside the lining cavity, so no wires cross visible surfaces.
- **Integrated lighting design:** Uplighters, pin spots and chandelier positions are planned with the lining layout before installation.
- **Aligned seam and pleat pattern:** Pleat spacing and seam positions are set to the bay grid so the room reads symmetrically in photographs.
- **Closed wall to roof junction:** A continuous connection between wall and roof lining removes the gap that usually reveals the frame.
- **Draped entrance and stage detail:** Coordinated entrance curtains, stage skirts and backdrops complete a consistent formal look.

Technical Specifications

Parameter	Specification
Lining	Pleated roof and wall lining, ivory or white
Cabling	Concealed routes inside lining cavity
Lighting	Uplighting, pin spot and chandelier positions
Detail	Coordinated entrance drape and stage skirt
Frame material	Hard-pressed extruded aluminum alloy 6061/T6, anodized finish
Frame profile series	64 mm / 82 mm / 100 mm / 120 mm square profiles by span
Bay spacing	3 m / 4 m / 5 m modular bays, extendable at any time
Eave height options	2.5 m to 4 m clear height, higher on request
Roof fabric	650 g / 750 g / 850 g per sqm double PVC-coated polyester, blackout available
Side wall options	Solid PVC, clear PVC, glass panel, mesh, glass door, ABS hard wall
Fire performance	Fabric meeting DIN 4102 B1 / EN 13501 B-s1,d0 on request
Wind load guidance	Engineered configuration by site exposure, documented operating limits
Snow load guidance	Steeper pitch and reduced purlin spacing for snow regions
Temperature range	-30 C to +70 C service range for fabric and frame
Design life	15 years frame, 8 to 10 years fabric under normal use
Warranty	5 years on aluminum frame structure, 2 years on PVC fabric

All values are configuration dependent. Final specifications are confirmed on the approved drawing before production.

Configuration Guide for Croatian Buyers

Use the table below to match the structure to your site exposure and event type. Our engineers confirm the final configuration against photographs of the ground, the prevailing wind direction and the event duration.

for more products please visit us on marquees-tent.com

Duty level	Typical use	Recommended build
Light duty	Garden parties, short events, sheltered inland sites	64 mm profile, alternate bay bracing
Standard duty	Weddings, corporate functions, coastal towns in summer	82 mm profile, cross-braced bays, mixed walls
Heavy duty	Exposed coast, island venues, public events, winter use	100-120 mm profile, full bracing, engineered anchors

Applications

This specification is used for gala dinners, award ceremonies, charity balls, diplomatic receptions, brand anniversaries and formal wedding banquets. Hotels in Zagreb, Opatija and Dubrovnik use lined marquees to extend ballroom capacity without losing the formal atmosphere guests expect. It also suits winter events, where the lining layer adds a small amount of insulation and reduces the visual coldness of an unlined roof.

Design Coordination Before the Build

The most successful gala marquees are decided on paper, months before anything arrives on site. We ask for the table plan, the stage position, the entrance route and the lighting concept, then align the lining pleat pattern and the uplighter spacing with those decisions. When the room is designed as a whole, the tent stops looking like a tent.

We also recommend a lighting rehearsal in the evening before the event. Uplighters that look correct in daylight can produce hot spots on pleated fabric at night, and a one hour adjustment at that stage protects the entire evening's photography.

Why Croatian Event Buyers Work With Tendars

Every project starts with an engineering question rather than a catalogue page: what wind will this structure see, what ground will it stand on, and how long will it stay up. Our technical team reviews site photographs, exposure and event duration before a configuration is proposed, and the recommendation is issued as a drawing set that a venue manager or a safety officer can actually read.

The factory behind that advice is vertically integrated. Aluminum profiles are cut, machined and welded in house, PVC panels are welded on our own high-frequency lines, and every frame is trial assembled before it is packed. Because we control both the metal and the membrane, a buyer gets one supplier responsible for fit, tension and finish instead of two parties pointing at each other when a panel does not line up.

Documentation is part of the product. Shipments include shop drawings, the packing list matched to crate labels, an installation sequence and a maintenance sheet, and we retain the drawings so that repeat orders match the first delivery exactly. For public events, hotel terraces and protected sites we also prepare the fire performance and anchoring paperwork that local inspections typically request.

Notes for the Croatian Market

Most Croatian event enquiries arrive with three requirements: the structure must look right for a coastal or heritage setting, it must stand up to wind that arrives without warning, and it must be installed inside a tight access window. We address these in the quotation stage rather than after the order, which is why our proposals include anchoring options, installation crew guidance and a delivery sequence suited to ferry timetables and old town access restrictions.

Documentation matters too. Public events, hotel terraces and protected sites increasingly require fire performance evidence and a clear anchoring plan. We prepare those documents with the order so the organiser can answer a venue or an inspection without delay, and we keep the drawings on file for repeat orders so the second season is faster than the first. For gala dinners and award ceremonies, that translates into a specification we confirm on the drawing, a delivered price to the Croatian port and a build sequence the local crew can follow without supervision.

Frequently Asked Questions

- **What ground surfaces can the tent be installed on?** Grass and soil take ground stakes, paved terraces take chemical anchors where drilling is permitted, and historic or protected paving takes ballast frames. We confirm the fixing method from photographs before the order, so the crew arrives with the right hardware.
- **How is the fabric maintained during the season?** Panels are cleaned with water and a mild detergent, checked for abrasion at contact points, and stored dry and loosely folded between events. A small repair kit with offcuts and a heat gun resolves most minor damage on site within minutes.
- **Do you supply spares for structures bought years ago?** Yes. Bay dimensions and profile colours are held constant across the range, so panels and fittings from earlier production batches remain compatible. We keep drawings on file to confirm the exact specification before shipping spares.

Packaging and Quality Assurance

Packing follows the build sequence rather than the shape of the components: the frame and roof bundle that closes the structure against weather is loaded last so it can be unloaded first. Fabric panels travel folded with interleaving to prevent abrasion in transit, and fittings are boxed by assembly stage so nothing has to be sorted on site.

Each crate is weighed, labelled and photographed before loading, and the photographs are sent with the shipping documents. That record settles most transit questions quickly and tells the receiving crew exactly what should be on the pallet before they sign for it.

Request a Quotation

Send us your site location, expected guest numbers, event dates and ground surface, and we will return a configuration proposal with anchoring options, installation guidance and a delivered price to your Croatian port or site. Samples of fabric and frame profiles can be couriered on request.
